

## Novel application for TRAM Safety Device

This picture shows a **TRAM fitted to a railway wagon** which is equipped with a conveyor to load aggregate onto hopper wagons. If the aggregate is wet or damp when it is being loaded, it tends to clog up at the top of the conveyor and has to be cleared manually. This is a potentially dangerous situation with the real risk of the operator slipping on the wet material at the top of the slope. By fitting the TRAM system, which secures the operator to the sliding rail, **the company has ensured that all possible action has been taken to provide the safest possible environment for its employees.** The TRAM system will now be assessed over the next few months with the object of eventually fitting them to all of the aggregate loaders.

## More products for Animal Feed Vehicles

We can now give more details of the blower which we are introducing specifically for the animal feed market. The compressor is the **Ingersoll Rand** (GHH parent company) model called the **Truckstar**. It is a tri-lobe machine giving smooth air flow up to 1000m<sup>3</sup> /hr and one bar pressure with reduced noise levels. It has been exhaustively tested on Rotary Seal applications and proved to be **very reliable, highly effective and with low noise levels.** Another feature of note is that this machine has **oil at both ends** so that the problems associated with under, or more usually, over greasing, are eliminated. We are offering this competitively priced bower either as a bare shaft machine or fully installed with associated equipment on tractor or trailer. We also have available probably the **most effective acoustic blower enclosure** in the country and the total package gives unrivalled performance at a competitive price. For more details on this and other blower related enquiries please contact **John Robinson on 07813 968055.**

Still on the subject of animal feed vehicles, we now have available a **new design of Animal Feed hose** which is designed to be **lighter in weight and harder wearing** than a conventional animal feed hose. We have been testing this new design in service for some time now and the results are looking very good indeed. For more details please contact **Steve Beswick on the number listed below**. Turning again to the subject of noise levels on Animal Feed vehicles, we have recently been able to significantly reduce **the noise levels on diesel engine power packs** by replacing the existing "Same" engine with the latest version of the Perkins 1104c diesel engine. Our long experience in producing low noise level power packs has shown how the refinement of a large number of small details leads to **significant reduction in noise levels**. Again, John can give you more details.

## Mystery Picture

The picture on the previous page shows what appears to be a very small, but quite unusual powder tanker but it has a very special application. Can you guess what it is? If you **ring John Robinson**, he may give you a clue. For a limited period only, we are giving away one of our stylish, warm and waterproof jackets to everyone who orders a qualifying quantity of spares on one order. These high quality jackets are also reversible so can be worn as a fleece if required. For more details please contact any of the following.

**Jeff Morris 07813 642006**

**Steve Beswick 07875 340139**

**Daniel Smart 01538 308008**

## More items for sale

We have a range of used pto's and compressors for sale at very keen prices.

We not only have a selection of used 2 bar GHH compressors, models CG 80 and CS 80 but we also have a few of the **latest model CS 85 machines** which produce 2bar/1000m<sup>3</sup> of air and so very high discharge rates can be achieved.

These machines are available with a variety of drive arrangements including hydraulic drive as well as belt drive. **Speak to John Robinson** and we will almost certainly be able to sort out the complete installation for you at a great cost saving over new equipment.
