

Compact Compressor Installation

This photograph shows the **ultra compact installation** that can be obtained using the GHH CG70 compressor. The compressor is mounted within the chassis rails and the only visible sign that a compressor has been fitted is that of the compressor hose coupling adjacent to the fifth wheel plate. This compressor is ideal for discharge of cement and similar powders giving 500 m³ and 2 bar pressure. Noise levels are less than 90dba and discharge rates are even better than the CG80 which this machine replaces. Since **no belts and pulleys** are used in the installation, **weight is saved and maintenance is very much reduced**. The first units have now been in service for over a year and have proved completely reliable. For more details on this and any other compressor related applications, **Please contact either John Robinson on 07813 968055 or Alan Speak on 07855 960955.**

Tank Top Safety

This picture shows the **All Round On -Tank Security** that we now offer. In this case the customer has a first class safety record which he maintains by always specifying the best safety features on the market. This is the latest version of our system, which, in this case is manually actuated, but other forms are available. Two full length and transverse handrails are provided and non slip material is applied to the top of the tank shell between the platforms. The handrails are to the latest requirements of 1.1m high and the entire handrail system is actuated by just two levers utilising gas struts to assist the lifting effort.

We removed the tank barrel from an old chassis and fitted it to a new chassis together with all new auxiliary equipment and painted the complete vehicle.

Used Compressors

We recently reported that we have significant stocks of used compressors and blowing sets available. We are again reminding operators that they can **save serious amounts of money** by contacting us before they think about buying new equipment of this type. Not only do we have a wide range of used GHH compressors available but we have compressors from other manufacturers as well, in addition to various makes of industrial engines. We have recently acquired a significant number of **Volvo and ZF PTO's** available at very **keen prices**.

Please contact John Robinson on 07813 968055 or Alan Speak on 07855 960955.

Train painting

This picture shows the inside of one of the rail units that we are currently repainting. We recently showed a photo of the curtain sided trailer which we use to bring the seating down to our paintshop at Foston and here they are installed in one of the repainted coaches.

We are forecasting **big increases in our train painting business** and work is progressing well on the huge new

paintshop we are constructing. This is due for completion in 3 months time and in the next issue we should have some photos of the work in progress. For all paintwork enquiries, **Please contact Joe Ptak on 07966 717396.**

Motor Racing Division

Although we finished well up the leader board last season, the final race involved us in a horrendous pile-up from which the chassis never recovered, although, happily the driver soon did. So, new season, new car and off we go to a flying start. First race back and we finished 8th out of 34 starters and next day finished 6th and a **fraction of a second off the fastest lap of the day**. Not bad for starters, with lots more opportunities for even better results during the season.

Hose Recovery Service

We often find when visiting customer's premises, that there are piles of delivery hoses that **have been discarded as unfit for further use**. However, when these hoses are returned to us for examination, we often find that the hose itself is entirely serviceable but maybe the couplings are faulty. By replacing couplings and retesting, we are able to **save the customer considerable sums of money**. This may also be the opportunity to replace cheap cast couplings with the more durable forged couplings which are much more resilient. If you would like more details of this service **Please contact Steve Beswick on 07875 340139.**

Belt Tensioning

We are finding that many operators are still having problems with **belts being incorrectly tensioned** resulting in belts being thrown off. This is easily resolved by the use of the belt tensioning device which is available from our **Stores 01538 308008.**
